

“As of April 4, 2020, for patients requiring mechanical ventilation 38 (3.3%) were discharged alive, 282 (24.5%) died, and 831 (72.2%) remained in hospital”

JAMA. 2020;323(20):2052-2059. doi:10.1001/jama.2020.6775

John W Scott, MD MPH @DrJohnScott · Apr 23, 2020

A better conclusion?
- "Among the 1,151 pts who were mechanically ventilated, at a median follow up of 4.5 days, 3% had gone home, 25% had died, & 72% were still in the hospital".
- "The eventual mortality rate will thus range between 25% (282/1151) and 97% (1113/1151)." 📌 (5/7)
