

What do you do when trying to decide whether to include a non-linear term in a model?

- test the nonlinear term, if significant leave it in
- if you have enough dfs, include the nonlinear term regardless of significance
- never include nonlinear terms
- comment

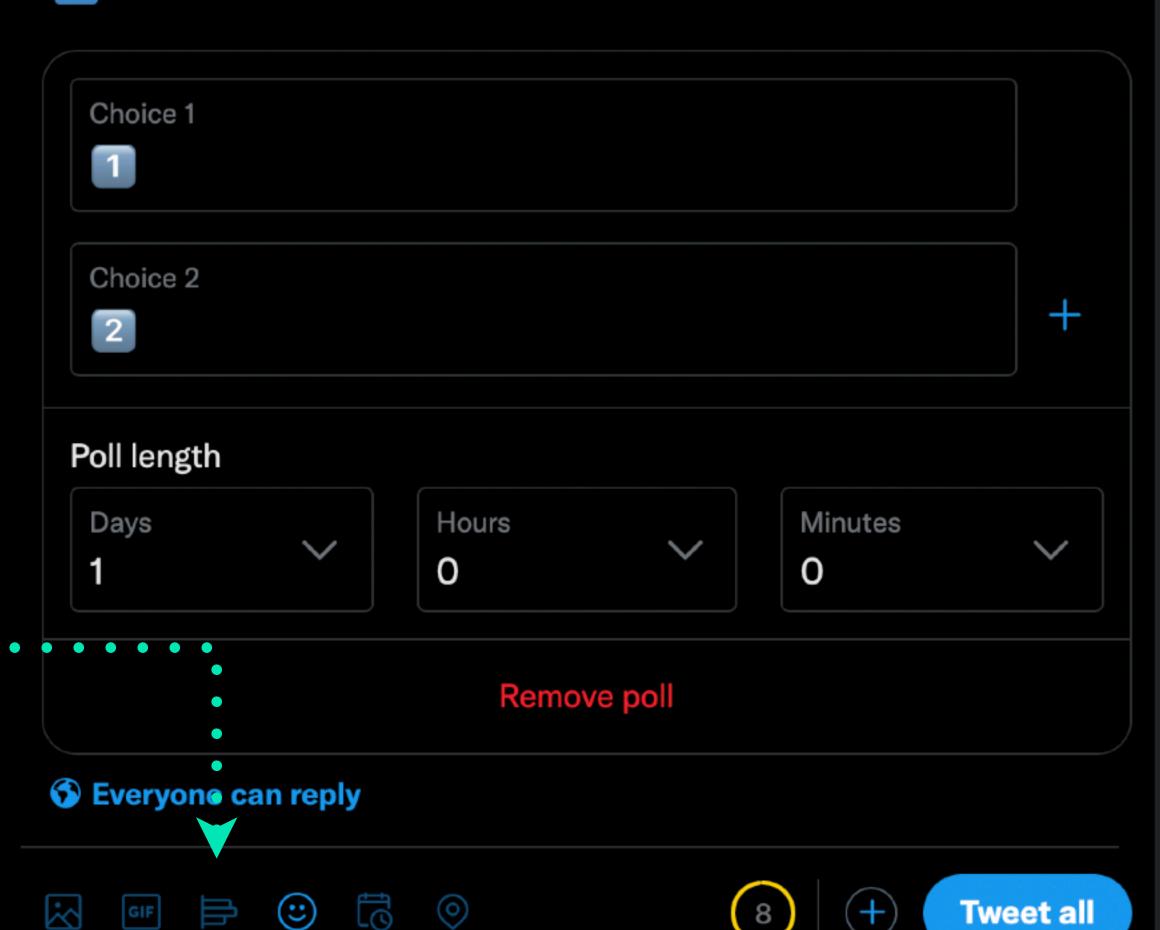

What do you do when trying to decide whether to include a non-linear term in a model?

- 1 test the nonlinear term, if significant leave it in
- if you have enough dfs, include the nonlinear term regardless of significance
- 3 never include nonlinear terms
